#### **W. D. Gann**

#### **the legendary Financial Prophet in the Early Twenties**

To most of the technical analysts and financial traders, the name, William Delbert Gann, is well-known. Gann was one of the greatest traders in the early twenty centuries, who has extremely arcane trading analysis techniques and methods that based on ancient mathematics and geometry. Yet, as it was never unveiled explicitly, the theory of Gann is admired by most, but grasped by few. One of his important techniques, the Gann Square of 9, was said to be inspired from the structure of Egyptian and Indian temples. Unfortunately, the details of his theory are often kept in veil. Late comers are very difficult to grasp the essence of his techniques. To the surprise of the reporter, Gann stroked a return of 1000% on his trading capital. He had made a total of 286 trades in 25 market days, 264 times won and 22 times lost. The profit rate was up to 92.3%. During that month, the average interval between trades was only 20 minutes. On one trading day, he made totally 16 trades, 8 out of them are the reversal points of the intra-day market fluctuation.

According to Gann's friend William Gilley, "One of the most astonishing calculations made by Mr. Gann was during last summer [1909] when he predicted that September Wheat would sell at \$1.20. This meant that it must touch that figure before the end of the month of September. At twelve o'clock, Chicago time, on September 30th (the last day) the option was selling below \$1.08, and it looked as though his prediction would not be fulfilled. Mr. Gann said, 'If it does not touch \$1.20 by the close of the market it will prove that there is something wrong with my whole method of calculation. I do not care what the price is now, it must go there.' It is common history that September Wheat surprised the whole country by selling at \$1.20 and no higher in the very last hour of trading, closing at that figure." Based on number he predicted elections date; world war and so on.

**Gann Theory is only theory which predicts time and price. We try to apply this theory for Indian market in a very very simplified manner.**
