Can market tops and bottom be predicted????

Yes yes yes!!!!!!!

Answer lies in understanding square of 9

The square of nine popularized by W. D. Gann is very reliable in determining market trends.

It is a useful market tool in almost all markets including indices, stocks, commodities, options and currencies. The numbers in the square of nine can be used as price levels of support and resistance and most importantly as time units. These numbers can be used to count minutes, hours, market days, calendar days, weeks, months and years.

Gann's most valuable contribution to analysis is square of 9 and squaring of price and time to analyse where the top and bottom of the market will be made.

How does it works on Indian stock market.....

We have analysed the intraday data nifty scripts to see whether market top or bottom are predetermined.....

Let us find out

We have taken many active scripts trading trading on intraday and found market tops and bottom out on the level mentioned

Come for seminar to know how everyday market tops and bottom out on the price mentioned.

If market top and bottom can be predicted for 1-2 scripts it can be by luck...but when more than 70% of script top and bottom can be predicted it is science.

Let us see how tops and bottom can be predicted.

Square of nine can perfectly predict which level market will achieve.

Gann swing techniques

Market is made up of bars and we will study this bars to identify trend of market.

Minor level trend analysis is carried out based on bars

Impulse and corrective wave are used to carry out long term trend analysis.

These 2 methods are used to carry out trend analysis.

Gann levels are used to identify zone for trading

Method for long term investor

- **Opportunity to multiply your money 5 times and more**
- **Learn to invest money where everybody is neglecting and at very less risk**

Its 100 % guaranteed, your money will multiply in next 3 years based on script you will select

All these techniques form part of "BECOME MASTER OF BULL AND BEAR SEMINAR

About Speaker: NileshSarda (BE)

NileshSarda, an Engineer, is trader by passion and profession .He has simplified Gann study for common man. Based on the studies a trader can predict tops and bottoms of market. *He has simplified various mathematical calculations* in easy language to interpret. Specially designed excel sheet for Square of 9, Gann levels, Range, are in ready format to trade in market. He makes sure, *every man who has urge to learn*, understands the concepts in very simple manner.

Every script or commodity has particular orientation for square of 9. And its implication is explained very well practically in live market. Gann Square of 9, Gann ABCD patterns, Gann emblem, time projection, Gann angel, Price Overlays, squaring of price and time methods are explained in very simple language for Indian market in live trading.

Major success includes predicting nifty top of 6300 and bottom 4570, silver top of 72000, Lead bottom of 89, zinc bottom of 89, crude bottom of 4480 are recent predictions the list goes on!!!!

W. D. Gann

the legendary Financial Prophet in the Early Twenties

To most of the technical analysts and financial traders, the name, William Delbert Gann, is well-known. Gann was one of the greatest traders in the early twenty centuries, who has extremely arcane trading analysis techniques and methods that based on ancient mathematics and geometry. Yet, as it was never unveiled explicitly, the theory of Gann is admired by most, but grasped by few. One of his important techniques, the Gann Square of 9, was said to be inspired from the structure of Egyptian and Indian temples. Unfortunately, the details of his theory are often kept in veil. Late comers are very difficult to grasp the essence of his techniques. To the surprise of the reporter, Gann stroked a return of 1000% on his trading capital. He had made a total of 286 trades in 25 market days, 264 times won and 22 times lost. The profit rate was up to 92.3%. During that month, the average interval between trades was only 20 minutes. On one trading day, he made totally 16 trades, 8 out of them are the reversal points of the intra-day market fluctuation.

According to Gann's friend William Gilley, "One of the most astonishing calculations made by Mr. Gann was during last summer [1909] when he predicted that September Wheat would sell at \$1.20. This meant that it must touch that figure before the end of the month of September. At twelve o'clock, Chicago time, on September 30th (the last day) the option was selling below \$1.08, and it looked as though his prediction would not be fulfilled. Mr. Gann said, 'If it does not touch \$1.20 by the close of the market it will prove that there is something wrong with my whole method of calculation. I do not care what the price is now, it must go there.' It is common history that September Wheat surprised the whole country by selling at \$1.20 and no higher in the very last hour of trading, closing at that figure."

Based on number he predicted elections date; world war and so on.

Gann Theory is only theory which predicts time and price. We try to apply this theory for Indian market in a very very simplified manner.
